

Research indicates that school climate can either be a positive influence on students' learning environment, or can serve as a significant barrier to students' learning. Indeed, elementary school teachers in Austin Independent School District (AISD) whose students provided positive ratings of behavioral environment, teacher support, adult fairness and respect, and academic self-confidence had students who made greater growth on TAKS in 2009-2010 than did their peers whose students rated school climate less favorably.*

The following tables show the total number of surveys students at Bowie returned in 2010-2011 (Table 1), the response rate by grade (Table 2), and the distribution of responses by race/ethnicity compared with the

Response options ranged from 1 = to 4 = . It is desirable to have a response of at least 3.0. Subscale comparisons across years are no longer available due to the addition of items 29 and 30, which are from the Control subscale of the Tripod survey. The survey was developed by Ron Ferguson and has been administered to schools across the country over the last decade. The Tripod survey was used in the Gates Foundation's Measures of Effective Teaching (MET) Project. The survey is designed to assess the degree to which students agree with a variety of statements designed to measure the following dimensions: caring, captivating, conferring, controlling, clarifying, challenging, and consolidating. For more information, please visit: <http://www.metproject.org/partners#cambridge>. Response options for the Tripod items were changed to reflect the 1 = to 4 = scale.
