

Research indicates that school climate can either be a positive influence on students' learning environment, or can serve as a significant barrier to students' learning. Indeed, students at schools with high levels of economic disadvantage and were high performing had higher ratings of 2011-2012 behavioral environment (3.04) than students at lower performing high economically disadvantaged schools (2.93).* Researchers have documented that positive ratings of student climate are believed to contribute to factors that help high economically disadvantaged schools "beat the odds" (Voight, Austin & Hanson, 2013).

The following tables show the total number of surveys students at Paredes returned in 2012-2013 (Table 1), the response rate by grade (Table 2), and the distribution of responses by race/ethnicity compared with the population (Table 3) for students at Paredes.
